# Glazier

Calculate the price of a window.

The user will input the height and width of a window in cm. Should be on a webpage, but for now as query-parameters.

Prices are stored in a database, the total price is calculated and presented to the user as HTML.

The window price is calculated as

Glass price

+ Frame price

Window price

- The price of glass is kr. 300,- per m^2.
- The price of frame type1 is kr. 100,- per m.
- The price of frame type2 is kr. 200,- per m.
- The price of frame type3 is kr. 350,- per m.
